

February 21, 2024

As the leader in research ultrasound, Verasonics continually strives to advance research-related efforts. Over the last decade, academic and commercial investigators in disciplines across the globe have come to rely on the Vantage® Research Ultrasound platform to enhance and expand their ultrasound-based research and development projects. Now Verasonics has a broader product range, with more performance, more options and more value than ever.

Verasonics Offerings & Options:

- The [Vantage NXT Research Ultrasound System](#), introduced at the 2023 IEEE-IUS conference, builds upon the versatility and flexibility sought by users of the Vantage platform, while adding new leading-edge performance and features. At the core of our advanced technology is a proprietary transceiver, delivering significant enhancements to transmit and receive signal fidelity. This technology enables a single system to deliver optimal performance over a diverse range of applications, from high power transmit for focused ultrasound procedures to the highly precise and linear transmit required for arbitrary waveform generation and signal coding. A wide variety of options and easy upgradability allow Vantage NXT customers to extend research and protect capital investments.
- The [Vantage Research Ultrasound System](#), the platform that made programmable ultrasonic research a reality. Vantage led the way with breakthrough technology to improve research and development efforts and has been a mainstay over the past decade. Verasonics is continuing to offer a limited number of systems as available.
- **Reconditioned Vantage Research Ultrasound Systems.** Verasonics also offers reconditioned Vantage solutions at affordable prices. Available in a variety of configurations with our most recent software and a 1-year warranty, these affordably priced options are accessible on a first-come, first-served basis.

To those who may think acquiring a Vantage platform is beyond their budget, we suggest revisiting our products and options. Verasonics has a variety of budget-friendly pricing offers available, many with flexible financing plans.* There is no better time to secure a new Vantage NXT system, one of the remaining new Vantage systems, or a reconditioned Vantage system. Whether you are an experienced user or new to Verasonics' solutions, you will find a Vantage system that meets, and can exceed, your current and future research requirements.

[Contact us](#) or email sales@verasonics.com to learn more about integrating a Vantage System into your research lab.

Sincerely,

Toni Baumann
Associate Director, Product Marketing & Communications
